

# Secure your Apps with Confidence

**VisualSoft Technologies** is an acknowledged leader in e-business security framework, comprising security components, products and services. VisualSoft Security Framework addresses all security aspects of e-business applications like transactions, inter-server communication, documents, files, authentication, digital certificates and payments.

## VisualSoft Crypt - Award Winning Component Build your apps with strong security layer

**VisualSoft Crypt** won Software Development Magazine's **Jolt Productivity Award** in the category of "Libraries, Frameworks and Components". The Jolt Awards were announced by CMP Media's Software Development Magazine recently at Software Development West Conference and Exposition at San Jose, CA.

VisualSoft Crypt provides security to sensitive data in your application. It provides encryption and decryption using standard cryptographic algorithms like AES, DES, Triple DES, BlowFish, IDEA, Serpent, Mars,. It has both stream cipher and block cipher algorithms. The component can encrypt and decrypt plain text as well as files of any format. It also supports MIME encryption.

## Visualsoft SecureDev Total Security for eBusiness Applications

VisualSoft SecureDev is a comprehensive suite of cryptographic and secure data communication components.

### The components in this suite include

VisualSoft Crypt, VisualSoft CryptPlus, VisualSoft Mail, VisualSoft HTTP, VisualSoft XMLSecure and VisualSoft FSecure.

VisualSoft SecureDev Suite can be used to provide total security for eBusiness applications.

## VisualSoft SecureDesktop Multi-utility Security Suite for Your Desktop

VisualSoft SecureDesktop is a multi-utility security suite, which provides strong security for files and folders. With VisualSoft SecureDesktop, a desktop user can encrypt/decrypt files/folders, create a self-decryption archive and send them to the FTP Server for secure file/folder exchange. VisualSoft SecureDesktop can be used to digitally sign, verify, encrypt and decrypt Microsoft Word and Excel documents.

### The products in this suite include

VisualSoft FileSecure, VisualSoft OfficeSecure and VisualSoft EnterpriseSecure.

# Secure your Apps with Confidence

## End User Products

### VisualSoft OfficeSecure

#### Creating Secure Office Environments

VisualSoft OfficeSecure is a set of two add-ins for Microsoft Office. VisualSoft OfficeSecure enables the user to digitally sign, verify, encrypt and decrypt Microsoft Word and Excel documents for secure document exchange. VisualSoft OfficeSecure enables enterprises to set up a secure document management environment with ease.

### VisualSoft FileSecure

#### Strong File Security with Compression

VisualSoft FileSecure is a desktop application which provides password based encryption /decryption of files for Windows environment. VisualSoft FileSecure can be used for secure file transfer – FTP with ease. Receiver does not need any FileSecure installation. 'File Split and Merge' feature is also provided to send files through mail.

### VisualSoft EnterpriseSecure

#### Creating Secure Enterprise Environments

VisualSoft Enterprise Secure is a desktop application which provides PKI and password based encryption / decryption of files and folders for Windows environment. VisualSoft EnterpriseSecure can be used for secure file transfer – FTP with ease.

## Enterprise Solutions

### VisualSoft TransactionSecure

#### Web Security for Online Transactions

VisualSoft TransactionSecure is a Security Agent, which operates on Web Server and Browser to provide total security for online transactions. It enables total trust for e-business applications through strong Digital Certificate based authentication, encryption and digitally signed receipt of transactions for both server and client. VisualSoft TransactionSecure provides security to all existing e-business applications without any customization.

### VisualSoft Security Service Provider

#### Security Service for B2B Applications

#### Security Service Provider™

VisualSoft Security Service Provider provides Security Service as per SSL specification. VisualSoft Security Service Provider 'Send Service' picks up the transmitted data from application, encrypts it and sends it securely to the other system. 'Receive Service' reads the received and encrypted data, converts it into plain text and sends it to the application. It can be used for Web based inter-server communication in e-business applications. VisualSoft Security Service Provider enables secure e-business application development in a quick time.
